PROFESSIONAL PROFILE

Systems Engineer with professional experience in cloud-based web development using Google Cloud Platform (GCP), Node.js, and Vue.js. Strong background in data analysis, backend architecture, and system modeling.

I have developed analytical and automation solutions integrating modern technologies such as React, Flask, and Power BI, and have participated in projects that connect data analytics with decision support.

My previous experience as a teaching assistant at Universidad de los Andes enhanced my abilities in technical communication, problem-solving, and leadership.

Passionate about data analysis, technology consulting, and automation projects, I seek to apply my knowledge to build efficient, useful, and high-impact solutions.

Professional portfolio:

EXPERIENCE

Auxiliary Engineer – GLocation

September 2025 – Present

- Development and maintenance of web applications using JavaScript (Node.js and Vue.js).
- Implementation of backend services and cloud infrastructure in Google Cloud Platform (GCP).
- Participation in the design and optimization of data workflows and internal tools.
- Collaboration with multidisciplinary teams to ensure scalable and efficient software solutions.

Academic Teaching Assistant – Universidad de los Andes

January 2025 – June 2025

Data Structures and Algorithms

- Support in practical labs focused on lists, trees, graphs, and sorting and search algorithms.
- Guidance for students in implementing data structures and analyzing algorithmic complexity.
- Assistance in feedback sessions and resolution of conceptual and programming questions.

Modeling, Simulation, and Optimization

- Assistance with practical exercises on discrete and continuous simulation.
- Support in mathematical modeling of systems using Python and academic simulation tools.
- Review of assignments and support in understanding heuristics and optimization methods.

Undergraduate Thesis Project – Universidad de los Andes

January 2025 – June 2025

- Development of an analytical solution to optimize course schedules through multidimensional modeling, ETL in Python, and visualization using Power BI.
- Application of relational databases, report automation, and analysis for academic decision-making.

EDUCATION

Universidad de los Andes – Bogotá, Colombia

B.S. in systems and computer engineering

Graduated: October 2025

SKILLS

Programming & Development

- Java, Kotlin, JavaScript (Node.js, Vue.js, React)
- Flask, REST APIs, Vite
- Git, collaborative workflows, CI/CD pipelines

Cloud & Data

- Google Cloud Platform (Compute Engine, Cloud Functions, BigQuery)
- SQL (PostgreSQL, MySQL)
- Python (Pandas, NumPy, Matplotlib)
- Data modeling, ETL, and automation

Analytics & Visualization

- Power BI, Tableau
- Data-driven dashboards and reporting

Soft Skills

- Clear and effective technical communication
- Academic leadership and teamwork
- Logical and structured thinking
- Time management and responsibility in academic environments

Languages

- English – B2 (Upper Intermediate)
- Spanish – Native
